Dr. Erica Lasek-Nesselquist, Ph.D.
Assistant Professor of Biology
Expanding the courses and research opportunities available to students.

With a focus on eukaryotic microbiology in evolution, Dr. Lasek-Nesselquist’s research has the potential to help combat intestinal issues faced in developing nations that lack potable water.

Her expertise in areas such as microbiology have resulted in new courses and research opportunities for students at Scranton.

Ph.D. in ecology and evolutionary biology, Brown University, Providence, RI and the Marine Biological Laboratory, Woods Hole, MA.

Our new science center’s glass-walled labs and collaboration spaces make intellectual collision among faculty and students a daily affair.

Since 2003 over 700 students have completed original research with professors through the faculty/student research program.
